prices of competing crops. If you will examine the record you will find that the beet crop is the only one that has been increased and that the higher price paid for beets is due to the combination of political factors.

Congressman's Address

You stated that beet sugar tonnage was lower than it had been in recent years and that the farmer's net return today is lower than it was in the past. This is true, but the situation has been caused by the economic depression and not by the government's intervention in the sugar industry.

We have the facts in the sugar industry.

Congressman's Address

There is nothing wrong with the sugar industry. The growers of Utah are being paid a fair price for their product. The problem is not with the growers, but with the government's interference in the market.

We have the facts in the sugar industry.

Congressman's Address

You implied that most of your speech was true. I believe that most of my speech was true.

We have the facts in the sugar industry.

Congressman's Address

During the five-year period 1934-1939, the beet crop in Utah expanded from 100,000 tons to 1,641,000 tons. This expansion was due to the government's intervention in the market, not to the growers' efforts. The government paid a higher price for beets than for other crops, and this incentive caused the increase in production.

We have the facts in the sugar industry.

Congressman's Address

The growers of Utah are not responsible for the current situation. The government's interference in the market has caused the decrease in sugar beet production and the decrease in the farmer's net return.

We have the facts in the sugar industry.
